CAREER SUMMARY

Data Analyst undergraduate (CSE - Data Science) with hands-on experience building end-to-end analytics pipelines, SQL-backed dashboards, and interactive reporting tools using Python, Power BI, and Streamlit. Delivered projects analyzing 400K+ Indian workforce records and government AQI data across 25+ states with case-study style analysis, insight generation, and decision-focused reporting. Completed an internship at INCOIS working on backend data processing and geospatial data in Python and SQL.

TECHNICAL SKILLS

Programming Languages: Python, SQL

Data Analytics: Data Cleaning, Exploratory Data Analysis (EDA), Data Visualization, KPI Analysis, Statistical Analysis, ETL, Data Transformation

Libraries & Frameworks: Pandas, NumPy, Matplotlib, Seaborn, Plotly

Tools & Databases: Power BI (DAX), Tableau, SQLite, MySQL, Git, Jupyter Notebook, Excel

PROFESSIONAL EXPERIENCE

SUMMER INTERN | INCOIS - INDIAN NATIONAL CENTRE FOR OCEAN INFORMATION SERVICES | HYDERABAD | APR 2025 - JUNE 2025

- Built and shifted frontend data processing modules to backend in Python and Django for the Search and Rescue Aid Tool (SARAT), reducing average API response time by 27% across 500+ load test requests.
- Processed and validated geospatial and structured data supporting real-time search and rescue decision-making across Indian coastal zones.
- Redesigned 3 data reporting components in Python, improving information clarity and reducing analyst time-to-insight on operational dashboards.
- Automated data validation workflows for daily ingestion pipelines, replacing manual QA checks on structured dataset processing.

Tech: Python, SQL, Django, MySQL, ETL, Data Visualization, Backend Optimization

EDUCATION

Bachelor's Degree | CSE-DS | Vignana Bharathi Institute of Technology | CGPA: 7.34 | 2022 - 2026

Intermediate | MPC | Narayana Junior College | Percentage: 90% | 2020 - 2022

PROJECTS

India Air Quality Intelligence Dashboard | Python, SQLite, SQL, Plotly, Streamlit | GitHub | Live App

- **Problem solved:** Government AQI records were fragmented across states, cities, stations, and pollutants, making hotspot comparison and threshold breaches difficult to evaluate.
- **Analysis performed:** Cleaned missing pollutant rows and used SQL CTEs, window functions, ranking, and CASE WHEN logic to classify Safe vs Breach cities against CPCB thresholds.
- **Insights found:** Identified top polluted cities, recurring geographic hotspots, severe breach zones, and pollutant-level contributors such as NO2, SO2, CO, NH3, and OZONE.
- **Why SQL mattered:** SQL created reliable grouping, filtering, breach classification, and ranking layers so the Streamlit dashboard showed analysis-backed insights, not just charts.

e-Shram Workforce Analytics Dashboard | Power BI, DAX, SQL, ETL, Excel | GitHub

- **Problem solved:** 400K+ workforce records needed to be converted into decision-ready segments for demographic, regional, and occupation-level planning.
- **Analysis performed:** Built SQL-based ETL and Power BI measures to analyze gender, age, education, occupation, disability status, and workforce distribution trends.
- **Insights found:** Found Apparel had the highest female workforce concentration (70K vs 6K male), while Construction and Automobile sectors were strongly male-dominated.
- **Why logic mattered:** SQL transformations and DAX measures created consistent categories, KPI cards, slicers, and cross-filtering that made comparisons trustworthy.

CERTIFICATIONS

- Oracle Cloud Infrastructure 2025 Certified Data Science Professional - Oracle
- NPTEL - Data Science for Engineers
